

Customer IQ: IonQ, Inc.

Generated Date: 2026-06-15

1. Executive Summary

IonQ, Inc. is a leading developer and commercial manufacturer of room-temperature trapped-ion quantum computers. The company has aggressively scaled via high-profile acquisitions in late 2025 and early 2026, transitioning toward a vertically integrated Integrated Device Manufacturer model. IonQ represents a high-opportunity partner for Sanmina as it outsources classical electronics, power systems, server chassis, and complex cabling for its multi-rack configurations.

2. Fit Assessment (at-a-glance)

- **Fit Tier:** High (*High/Med/Low*)
- **Recommended Segment:** system / box-build assembly
- **Fit Rationale:** IonQ utilizes a hybrid manufacturing model that outsources standard classical systems, power distribution, and multi-rack integration. Their Forte Enterprise and Tempo systems are standard 19-inch rack-mounted systems which fit Sanmina's advanced box-build, backplane, and routing capabilities. Furthermore, IonQ requires strict ITAR and AS9100 compliance for its aerospace, defense, and space-based hardware divisions, aligning perfectly with Sanmina's high-reliability operational footprint.

3. Company Overview

Legal Name	IonQ, Inc.
Headquarters	College Park, Maryland, United States
Founded	2015
Ownership	Public (NYSE: IONQ)
Website	https://www.ionq.com
Employee Count	Over 1,300 employees as of early 2026
Revenue	\$130.0 million for FY2025

4. Business & Products

- **Business Description:** Designs, builds, and deploys room-temperature trapped-ion quantum computers, quantum-safe hardware, cryptography solutions, and high-precision quantum sensors.
- **Products:** • IonQ Forte Enterprise (8-rack standard 19-inch enterprise footprint quantum computer)

- • IonQ Tempo (3-rack standard 19-inch footprint quantum computer)
- • Quantum-Safe Hardware & Cryptography (QKD hardware, optical single-photon detectors, QRNG)
- • Quantum Sensors (optical atomic clocks, gravimeters, inertial navigation systems)
- **End Markets:** • Aerospace & Defense / Space Systems
- • Public Sector & National Intelligence
- • Financial Services
- • Life Sciences & Computational Chemistry
- • Automotive & Advanced Manufacturing
- • Telecommunications

5. Manufacturing & Supply-Chain Footprint

- **Manufacturing Footprint:** Uses a hybrid manufacturing model with final assembly, optical-axis alignment, ultra-high vacuum sealing, and system calibration handled in-house at a 105,000-square-foot facility in Bothell, Washington. Acquired SkyWater Technology for domestic QPU production.
- **Current EMS Providers:** None identified.

6. Opportunity Signals / Pain Points

- Acquisition of SkyWater Technology for \$1.8 billion in May 2026, transitioning IonQ to an IDM model requiring downstream electronics integration.
- Acquisitions of Oxford Ionics, Vector Atomic, and Capella Space in late 2025, expanding hardware and defense integration complexity.
- Appointment of Inder M. Singh as CFO & COO in September 2025 to optimize global procurement and scale supply chain logistics.

7. Compliance & Certification Needs

- ITAR (International Traffic in Arms Regulations)
- AS9100 (Aerospace Quality Management)
- ISO 9001
- ISO 14001
- ISO 27001
- SOC 2 Type II
- SOC 3

8. Competitive Landscape

- IBM Quantum
- Google Quantum AI
- Quantinuum
- Rigetti Computing
- PsiQuantum
- D-Wave Systems

9. Key Contacts / Decision Makers

- Inder M. Singh — Chief Financial Officer & Chief Operating Officer (CFO & COO) (Oversees global supply chain, procurement, and scaling operations; primary target for high-level EMS outsourcing decisions.)
- Carleigh Weber (Lytle) — Director of Supply Chain Management (Manages vendor onboarding, logistics, production control, and inventory compliance.)
- Dr. Dave Mehuys — Vice President of Product Engineering (Leads systems hardware engineering and component modules.)
- Petrina Zaraszczak — VP of Business Operations & Integration (Optimizes vendor efficiencies and integrates newly acquired companies.)
- Niccolò de Masi — Chairman & Chief Executive Officer (Leads overall corporate scaling, M&A strategy, and commercial execution.)

10. Recent News & Trigger Events

- Stockholders approved the \$1.8 billion acquisition of SkyWater Technology on May 8, 2026.
- Completed the \$1.075 billion acquisition of Oxford Ionics in September 2025.
- Acquired Vector Atomic (October 2025) and Capella Space (July 2025) to build out satellite-sensing and quantum-secure communication systems.

11. Risk Flags

- The aggressive vertical integration strategy, including the SkyWater acquisition, could eventually lead IonQ to consider in-sourcing some advanced electronic subassemblies.

12. Recommended Engagement Strategy

- Pitch standard 19-inch rack-mounted classical systems, power distribution backplanes, and cabling assembly to Carleigh Weber and Dr. Dave Mehuys to relieve pressure on their internal Bothell facility.
- Target Inder M. Singh with a supply-chain optimization and cost-reduction plan supporting their transition to a multi-billion-dollar global organization.
- Promote Sanmina's ITAR and AS9100 certified facilities to address the ruggedized and space-capable requirements of IonQ's recently acquired defense and satellite subsidiaries.
